

THE BRIDGE

A Man-Made Resource

What is it?

A bridge is a structure built by people to cross over rivers, valleys, or roads.

It connects two places so people and cars can travel safely.

Bridges are made of concrete, steel, wood, or stone.

24 km Longest
bridge in the world!

2,000+ Years old
Roman bridges still stand!

100+ Workers build
big bridges!

Did You Know?

The tallest bridge in the world is in France — it's called the Millau Viaduct! It's even taller than the Eiffel Tower! Engineers designed it so carefully that it looks like a beautiful white sail across the valley.
