

THE DAM

Water Makes Electricity!

What is it?

-  A dam is a big wall built across a river.
-  It stops water and makes a lake behind it.
-  Water flows through the dam and spins wheels.
-  The spinning wheels make electricity for our homes!

Rain fills the lake

Water flows down

Wheels spin fast

We get light!

Did You Know?

The biggest dam in the world is in China — it's called the Three Gorges Dam. It's as long as 500 soccer fields! The water can fill 4,000 swimming pools every second!
